

Drill documents in one pass - not punch in many parts

Single- and double-spindle table top drills from Dürselen

Using a manual hole punch for instruction or operation manuals is tedious, slow and inaccurate as well as risky for collated documents. Use a Dürselen bench-top paper drill for piles or documents up to 50 mm in a single pass - no splitting, no resorting and always the more accurate result.

Dürselen table-top drill models include two single spindle models and one double spindle model to meet individual applications.

All Dürselen bench-top paper drills have a smooth sliding table with a 6-way program trim for different common hole patterns (see over). A paper is quickly located on the table and stays in position on the sliding table for multiple hole patterns.

The paper drills are easy to operate and compact in design, suiting all working environments.

All Dürselen table top paper drills are CE certified and conform to RoHS (EG directive 2002/95/EG)
